The dataset Spain02 corresponds to a 20 km grid covering the mainland Spain and Balearic Islands, including daily interpolated rainfall data from over 2000 stations of the Spanish Meteorology Agency (AEMET, www.aemet.es). This dataset has been developed jointly by AEMET and Santander Meteorology Group (University of Cantabria-CSIC, www.meteo.unican.es) and it is distributed freely for research use, not being permitted any commercial use of this dataset (contact AEMET for information on commercial applications). The work and products made wholly or in part with these data should also be public and must be made freely available to the scientific community. Also, to ensure access to the updated original source, the redistribution of data to third parties is not allowed.

Note that the data set provided may contain intrinsic errors due to the data handling or the interpolation process. Therefore, AEMET and University of Cantabria are not responsible for any use that may be made of such data or any consequences arising from their application. The description of the grid features and limitations are described in:

The publications, works or studies of any kind using this data set should cite the above publication and include the following acknowledgments: "The authors thank AEMET and UC by the data provided for this work (Spain02 gridded precipitation data set)."
